

# VEILCALCE

Apply one coat of **PRIMER MINERAL** (for rustic rough effects) or **PRIMER MULTI-USE** for smooth effects. Let dry 6 hours.

Apply the first coat of **VEILCALCE** (diluted 20%) with black bristle brush; work mixing circular and cross-hatch motions to create brush marks (or adjust your strokes to eliminate brush marks as much as possible). Let dry completely or “in love”.

When dry or “in love”, apply a second layer of **VEILCALCE** with the same dilution or from 20% to 30% with water; using same motions with the same brush; apply using diagonal strokes. It is possible to change the color or just a shade, however, lighter than 1st layer to create more contrast.

Option: a third coat untinted, or very lightly tinted (3 to 4 values less than the second coat) very diluted with water (500 to 800 % or even more) can be brushed, when second layer is still “in love” in order to get “milky effects”. Afterwards, the surface may be slightly burnished with a stainless steel trowel to bring out the brush marks design created in previous layers. Can be waxed when completely dry.

During exterior application: protect surface from heavy rain for 3 days.
